PROJECTS

AI Research Agent (Multi-Agent LLM Workflow) | *Python, Langchain, Streamlit, Tool Calling, Web Scraping*

- Engineered a multi-agent LLM workflow that automates research by orchestrating Search, Reader, Writer, and Critic agents.
- Integrated Tavily Search API and BeautifulSoup for web search and content extraction from multiple sources.
- Generated structured research reports using LangChain, prompt engineering, and AI-based report evaluation.
- Built an interactive Streamlit interface for topic-based report generation and research workflow visualization.

Lexis | *Python, Langchain, ChromaDB, Hugging Face, Mistral AI, Streamlit*

- Built an end-to-end RAG application that enables users to upload PDF documents and ask natural-language questions with responses grounded in document content
- Designed a document ingestion pipeline using PyPDFLoader, recursive text chunking, and Hugging Face embeddings for semantic indexing.
- Implemented ChromaDB vector storage and MMR retrieval to improve retrieval quality and reduce redundant context.
- Developed a Streamlit interface for PDF upload and real-time conversational document question answering.
